DÉTAILS

Contract type           CDI
Position:               Data Scientist / Responsible for R&D
Place                   Paris, France
Firm:                   HTS Consulting

DESCRIPTION:

We are a fast-growing strategic consulting firm. Clearly focused on innovation, we are inventing a new type of consulting. Besides our traditional missions, we just have launched several innovative offers based on big data.

In this context, we are looking for a young PhD in informatics or mathematics in order to reinforce our R&D.

In support of our teams, you will work on issues related to Big Data and Machine learning and on the conception of predictive tools by bringing in your technical know-how. Your principal missions will be the following:

- pursuing research in the data processing field
- exploiting internal and external data-base and to automating data collection and treatment
- building predictive models based on this data
- being proactive by putting forward proposals concerning the implemented methodologies

When joining us, you will use your knowledge and expertise to help the development of an innovative consulting firm and, by doing so, be part of a strong entrepreneurial adventure. You will benefit from a pleasant and more open working environment as well as a perfectly located workplace (the Metro line 1 is only a two minute walk from our office).

You will be asked in the future to supervise a team of data scientists. You will be able to maintain strong and close links with the academic world and, if needed, work in connection with research laboratories. You may also have the opportunity to learn the job of a consultant in strategy.

The profiles that we are looking for

- PhD with a specialization in mathematics or informatics coming from a well-known PhD school.
- Strong awareness of statistics / data science / modelling
- Good knowledge of new technologies, capacity to be proactive and to bring new ideas, curious.
- Teamworking and friendly in order to fit with our corporate culture

To be successful, the candidate will need to have skills in the following fields

- **Deep knowledge and experiences in statistics and datamining**: manipulation and data analysis, good knowledge of descriptive and predictive statistical analysis methods, development of predictive models and algorithm.
- **Expertise in statistical programming language (R, Python, SAS, SPSS...)**, relational data base management (SQL), development of web oriented application.
• Experience with IT development tools and data visualization tools would be appreciated.

Presentation of the firm

HTS Consulting is a young strategy and organisation consulting firm founded in 2011.

Its reason for being is to allow the top management ranks of major French and European groups to anticipate and adapt themselves to the many substantive changes currently impacting their markets.

Created by partners from leading consulting firms, HTS Consulting strives to help its clients define their vision and prepare their answers to the challenges of tomorrow, in terms of innovation, marketing & sales performance, and organizational transformation.

Convinced that consulting firms have to make their offers and internal operations evolve, HTS Consulting has adopted an absolutely new way of doing consulting, acting more like a start-up. This leads the firm to launch, on a regular basis, new offers that are breaking with the traditional consulting market.
